This edition is intended for nurses in every practice setting who are involved with providing care to individuals with cancer, those at risk for cancer, and survivors of cancer. The book covers the most common cancers and strategies for nursing care and is an excellent resource for nursing students, nurses who find themselves providing care to individuals with cancer but may not consider themselves oncology nurse specialists, and other health professionals who have an interest in oncology care. Nursing faculty find this text helpful when developing oncology content for undergraduate courses.

The Chemotherapy Source Book, Fourth Edition pulls together all the current information on the chemotherapeutic management of cancer patients, including choice of chemotherapeutic agents, use of combinations, and toxicity of individual drugs. Organized by disease site, the book brings together pharmacologic and patient management information in one source that clinicians can consult for any question encountered in the delivery of chemotherapy. This updated Fourth Edition includes new drugs as well as new indications for older drugs. Content has been streamlined to provide essential information more quickly for the busy practitioner. Plus, this edition is softcover for greater portability and convenience.

Covers the most common cancers and strategies for nursing care.

Since its publication, A Cancer Battle Plan has sold more than 200,000 copies and continues to be a source of inspiration and information for people struggling with cancer and other degenerative diseases. Now, Dave Frahm offers a companion book of practical help and guidance for those who want to build a natural program to lighten their toxic load, better their health, and find a healthy, safe way to fight chronic disease. In A Cancer Battle Plan Workbook readers will start to regain control of their health and learn how to: " identify the stressors impacting health;" " detoxify the body;" " restore the body's natural healing power and protective system;" " assess how the body is performing and what help it needs; and " develop six key characteristics of people who have won back their health. With A Cancer Battle Plan Workbook, readers can begin to win the war against cancer.

The book addresses controversies related to the origins of cancer and provides solutions to cancer management and prevention. It expands upon Otto Warburg's well-known theory that all cancer is a disease of energy metabolism. However, Warburg did not link his theory to the "hallmarks of cancer" and thus his theory was discredited. This book aims to provide evidence, through case studies, that cancer is primarily a metabolic disease requiring metabolic solutions for its management and prevention. Support for this position is derived from critical assessment of current cancer theories. Brain cancer case studies are presented as a proof of principle for metabolic solutions to disease management, but similarities are drawn to other types of cancer, including breast and colon, due to the same cellular mutations that they demonstrate.

M. Sara Rosenthal, Ph.D., bestselling author of The Thyroid Sourcebook (recommended by The New York Times), The Thyroid Sourcebook for Women and The Hypothyroid Sourcebook has just published The Thyroid Cancer Book, the only consumer book to date devoted to thyroid cancer. A thyroid cancer survivor herself, Rosenthal wrote the book she wishes she'd had when diagnosed in 1983. The Thyroid Cancer Book explains all forms of thyroid cancer and its treatment in plain language. It was written in consultation with the leading medical experts on thyroid cancer in North America, and is the only book of its kind in the world. It includes extensive information on: Significant risk factors for developing the disease, and how to find and investigate lumps in the neck Papillary and follicular thyroid cancers, as well as the less common medullary and anaplastic cancers Treatment options, surgery and radioactive iodine Post-treatment follow up, whole body scans and Thyrogen Self-healing and complementary therapies The emotional impact of cancer on families and loved ones Palliative care While thyroid cancer accounts for roughly two percent of all cancers, it's among the fastest growing cancers in incidence. Its causes in North America are associated with fallout from nuclear testing in the American midwest, and environmental causes which Rosenthal also writes about in detail. Recommended by Johns Hopkins Thyroid Tumor Center, The Thyroid Foundation of America, The American Foundation for Thyroid Patients, The Thyroid Foundation of Canada, CancerHelpUK, and thyroid cancer patients from both Thyca and ThyVors.

The merging of different basic and clinical science disciplines towards the common goal of fighting against cancer has long ago called for the establishment of a comprehensive reference source both as a tool to close the language gap between clinical and basic science investigators and as a platform of information for students and informed laymen alike. The Encyclopedia of Cancer provides rapid access to focused information on all topics of cancer research for clinicians, research scientists and advanced students. Given the overwhelming success of the Second Edition, which appeared in 2009, and fast recent development in the different fields of cancer research, it has been decided to publish a third fully revised and expanded edition, following the principal concept of the first edition that has proven so successful. Recent developments are seeing a dynamic progress in basic and clinical cancer science, with translational research increasingly becoming a new paradigm in cancer research. In particular, new approaches to both Personalized Cancer Medicine and Targeted Therapies have made promising progress. While the Second Edition featured scholarly contributions from approximately 1,000 scientists/clinicians in four Volumes, the Third Edition includes 1,300 contributors in 7 Volumes with an A-Z format of approx. 7000 entries. It provides definitions of common acronyms and short definitions of related terms and processes in the form of keyword entries. In addition, there are detailed essays, which provide comprehensive information on syndromes, genes and molecules, and processes and methods. Each essay is well-structured, with extensive cross-referencing between all entries. In the Third Edition, topical Essays present a comprehensive picture of major cancers, such as Breast Cancer, Colorectal Cancer, Prostate Cancer, Ovarian Cancer, Renal Cancer, Lung Cancer, and Hematological Malignancies, Leukemias and Lymphomas. For each of these cancers, different authoritative Essays are included that cover topics ranging from Pathology, to Clinical Oncology and Targeted Therapies. This new feature should meet the expectation that a wide community has towards a major cancer reference works. The Encyclopedia of Cancer will be accessible both in print and online, and this information source should be of value to both the clinical and basic scientific community as well as to the public.
