Get longer, safer system operating life for every facility maintenance dollar! How do you efficiently manage facility infrastructure? You turn to this hands-on, answer-packed, time- and money-saving guide designed for every facility manager who has to do more with less. It shows you how to conduct seamless facility condition inspections that provide an overall snapshot of the current condition of your facility, generating enormous amounts of priceless information that will help you reduce or eliminate downtime and keep your facility humming. This comprehensive, portable toolkit packs everything you need to: \* Continually assess the condition status of every aspect of a building: all of its systems and equipment, components and subcomponents \*Identify deficiencies before they become major problems \* Get better performance from every system

This document provides the comprehensive list of Chinese National Standards and Industry Standards (Total 17,000 standards).

This document provides the comprehensive list of Chinese Industry Standards - Category: MT; MT/T; MTT.

This is Volume 1 of the fully revised second edition. Organized to provide the technical professional with ready access to practical solutions, this revised, three-volume, 2,100-page second edition brings to life essential ASME Codes with authoritative commentary, examples, explanatory text, tables, graphics, references, and annotated bibliographic notes. This new edition has been fully updated to the current 2004 Code, except where specifically noted in the text. Gaining insights from the 78 contributors with professional expertise in the full range of pressure vessel and piping technologies, you find answers to your questions concerning the twelve sections of the ASME Boiler and Pressure Vessel Code, as well as the B31.1 and B31.3 Piping Codes. In addition, you find useful examinations of special topics including rules for accreditation and certification; perspective on cyclic, impact, and dynamic loads; functionality and operability criteria; fluids; pipe vibration; stress intensification factors, stress indices, and flexibility factors; code design and evaluation for cyclic loading; and bolted-flange joints and connections.
