Jean Piaget was one of the most significant contributors to our current understanding of how children think and learn, from birth through to adolescence. In this comprehensive and accessible new book, Ann Marie Halpenny and Jan Pettersen capture the key concepts and principles of Piaget's fascinating work on children's thinking, and explore how thinking evolves and develops from infancy through the early years and beyond. Areas covered in *Introducing Piaget* include: key milestones and achievements in children's thinking; understanding the physical world through senses and movement in infancy; supporting the emergence of symbolic thought and language in the early years; understanding object permanence; implications of egocentric thinking in early childhood learning and development. Throughout the book, the consequences of these developments for children's social, emotional and intellectual development are discussed. Updates on Piaget's theory are also outlined with reference to more recent work on cognitive development in childhood. Each chapter provides a concise summary of material presented through a consideration of the implications for practice in working with children. A glossary of key Piagetian terms is also included. With a particular focus on how Piaget's principles and concepts can be applied to children in early childhood, this exciting new book is an invaluable resource for teachers, practitioners and students with an interest in learning and development in the early years.

This book explores the new product development process of firms developing frugal innovation for the base-of-the-pyramid (BOP) markets in developing countries. Frugal innovations are products characterised by an affordable price-point, durability, usability and core functionalities that are highly adapted to BOP consumers' needs. Frugal products have the potential to drive the development progress and living standards of low-income consumers. With an innovation framework developed from worldwide frugal case studies, this book provides detailed insights through two in-depth start-up firms in Indonesia that have successfully launched frugal products for the low-income market. These two start-ups have addressed two major development challenges for not just Indonesia, but also the global BOP market — traditional methods of cooking and access to clean drinking water. A detailed roadmap is developed from insights into the processes and management decisions of these two start-ups and combined with previous studies on frugal products. Providing a detailed roadmap across the different phases and stages of the new product development process when developing frugal products, this book will be insightful to not only innovators but also investors and government agencies supporting their activities.
