With its focus on the normal and abnormal mechanical interactions between the muscles and joints of the body, *Kinesiology of the Musculoskeletal System: Foundations for Rehabilitation, 3rd Edition* provides a foundation for the practice of physical rehabilitation. This comprehensive, research-based core text presents kinesiology as it relates to physical rehabilitation in a clinically relevant and accessible manner. It provides students and clinicians with the language of human movement — and acts as a bridge between basic science and clinical management. Full-color anatomic and kinesiological illustrations clearly demonstrate the anatomy, functional movement, and biomechanical principles underlying movement; and dynamic new video clips help you interpret new concepts with visual demonstration. More than 900 high-quality illustrations provide you with the visual accompaniments you need to comprehend the material. Clinical Connections boxes at the end of each chapter in Sections II through IV highlight or expand upon a particular clinical concept associated with the kinesiology covered in the chapter. Special Focus boxes interspersed throughout the text provide numerous clinical examples that demonstrate why kinesiological information is needed. Critical thinking questions challenge you to review or reinforce the main concepts contained within each chapter. Evidence-based approach emphasizes the importance of research in physical therapy decision-making. Evolve site for students comes with video clips, answers to study questions, and references linked to Medline. Evolve site for instructors includes an image collection from the text, teaching tips, and lab activities. NEW! *Kinesiology of Running* chapter covers the biomechanics of running. NEW! Video clips help you interpret new concepts with visual demonstration. NEW! All-new content on the pelvic floor. NEW! Thoroughly updated references emphasize the evidence-based presentation of information in the text. NEW! QR codes linked to videos for easy viewing on mobile devices. NEW! Pageburst enhanced edition allows you to access multimedia content from the eBook without going to another website.

This text amasses data and surveys from a century of research on the paranormal on four continents: Europe, Asia, and the Americas. Studying the tensions between religious and scientific perspectives, the author reviews numerous substantiated accounts of demon-possession, of memories of past lives, of ghostly apparitions, and out-of-body experiences. He analyzes the medical evidence and what such experiences imply about survival after death. The author then looks at the reasons for the taboos on scientific discussion of such research within the social sciences, and proposes a new paradigm for a more holistic view of the field.

The key to self-development, says Mike Sayama, is the experience of Samadhi, a state of relaxed concentration in which the individual neither freezes out of fear nor clings due to desire. Simply stated, samadhi is the free flow of vital energy within the body and between the body and the universe. Moving effortlessly across traditions and techniques, Sayama discovers that sages throughout history—Greek philosophers, German mystics, Indian seers, and our own Albert Einstein among others—have taught that this experience of transcendental oneness lies at the heart of full self-realization. The first part of the book studies self-realization in Zen Buddhism. The author pinpoints its essence in Buddha's enlightenment. The development of Zen is then traced, continuing down to living masters who in very recent times have transplanted their lineages from Japan to the United States. Sayama notes that we must choose as masters those to whom the authentic teaching has been transmitted through generations, and he examines in loving detail the sometimes strange and astonishing behaviors of those whose very presence communicates the state of samadhi. The second part of the book presents Zen therapy, a way of self-development emphasizing the cultivation of samadhi through psychophysical training. Sayama compares the effects of Rolfing, Feldenkrais, and Zen therapy on the human body and mind. He includes easy-to-follow directions for creating the inner state he describes. He tells vivid stories of extraordinary cases treated from the point of view that the best therapy is nothing less than the removal of all dualism. Four main practices are presented: zazen (meditation), hara development, circulation of the vital energy, and communication.
