Geologic Cross Sections New Mexico Bureau Of Geology ...

The focus of this report is to compile existing geologic and geophysical data, integrate new geophysical data, and interpret these data to construct three, detailed geologic cross sections across the Questa area. These cross sections can be used by the Village of Questa to make decisions about municipal water-well development, and can be used in the future to help in the development of a conceptual model of groundwater flow for the Questa area.

Geologic cross sections and preliminary geologic map of ...

This new geologic map is a compilation of sixteen 7.5-min USGS quadrangle maps and encompasses an area from Tijeras Arroyo on the south to Santa Ana Mesa north of Santa Ana and San Felipe Pueblos, and from the crest of the Sandia Mountains westward across the Rio Grande and onto the Llano de Albuquerque (West Mesa) west of the city limits of Albuquerque and Rio Rancho.

Geologic Map and Cross Sections of the Embudo Fault Zone ...

The geology of New Mexico includes bedrock exposures of four physiographic provinces, with ages ranging from almost 1800 million years to nearly the present day. Here the Great Plains, southern Rocky Mountains, Colorado Plateau, and Basin and Range Provinces meet, giving the state great geologically diversity. The geologic history of the state began with its assembly during the Yavapai and Mazatzal orogenies 1750 to 1650 million years ago. This was followed by 200 million years of tectonic quies

Student Assignment. Geologic cross sections provided two-dimensional slice of Earth's subsurface and is used to help understand geologic conditions that occur in specific areas of the cross section. Creating and evaluating cross-section is a very important aspect of the geoscience profession. The following exercise presents an overview of how to create cross sections and use them as a scientific evaluation tool.
