and covers the U.S. regulatory framework and standards governing the transport and use of such materials. Section II examines institutional and organizational program elements and provides guidelines for developing these programs to reduce liability and risk while lowering point-source pollution and total hazardous waste production. The logistics approach to hazardous materials yields exponential benefits in costs and the reduction or elimination of such materials. It limits organizational liability and, at the same time, reduces the costs associated with

This research effort developed a modification to the HAZMAT program so that the program could provide the user with the capability to generate an estimate during the concept exploration and design phases for the total costs associated with hazardous materials usage in a major weapon system. Using the HAZMAT database, a spreadsheet was developed which projects a cost for a weapon system based on its total surface area and the number of aircraft to be produced by

Download Free Hazardous Material Hazmat Life Cycle Management Corporate

performing an analogy with a similar weapon system. The modification uses algorithm which are based on the hazardous material substances rather than processes which use hazardous materials. This enables the user to eliminate various substances entirely from the weapon system rather than trying to identify every process which uses a particular substance. The modification was identified to be the most efficient method of calculating an estimate during the early phases of the life cycle through in depth interviews and analysis of existing literature on the subject. The authors feel

Download Free Hazardous Material Hazmat Life Cycle Management Corporate

that the methods discovered in this thesis will provide insight for future revisions of HAZMAT and new attempts to formulate a life cycle cost model for hazardous materials.

The Air Force realizes that the life cycle cost (LCC) associated with hazardous materials is a significant cost in the acquisition of major weapon systems. In trying to mitigate the growth of environmental LCC for future weapon systems, the Air Force has developed a tool called the

Download Free Hazardous Material Hazmat Life Cycle Management Corporate

Hazardous Material Cost Trade-off Analysis A Tool (HAZMAT CTAT). The HAZMAT CTAT estimates the LCC for weapon system hazardous materials, so that intelligent decisions can be made in the early stages of the acquisition process. The problem with implementing this program into the acquisition process is that an independent computer model evaluation has never been conducted on the HAZMAT CTAT program. This thesis contains a rigorous computer model evaluation of the HAZMAT CTAT. The evaluation includes a computer model verification study using Decision Program Language (DPL) to

Download Free Hazardous Material Hazmat Life Cycle Management Corporate

verify if the HAZMAT CTAT model and an operational validation study using C-17 historical data to test if the HAZMAT CTAT accurately predicts actual costs.

To satisfy demands for software systems that collect, organize and utilize pollution prevention auditing, design and implementation, hundreds of software companies have developed and are marketing software systems that perform these functions. Co

Download Free Hazardous Material Hazmat Life Cycle Management Corporate Community And Organizational Planning A

A large number of chemicals are used on land at shore facilities, in the air in combat and reconnaissance aircraft, on seas around the world in surface vessels, and in submarine vessels by the navy and marine corps.

Although the chemicals used are for the large part harmless, there is a significant amount of chemicals in use that can be health hazards during specific exposure circumstances. The Navy Environmental Health Center (NEHC) is primarily tasked with

Download Free Hazardous Material Hazmat Life Cycle Management Corporate

assessing these hazards. The NEHC completes its tasks by reviewing toxicological and related data and preparing health-hazard assessments (HHAs) for the different chemicals. Since the NEHC is continually asked to develop these HHAs, the National Research Council (NRC) was asked to assess independently the validity and effectiveness of NEHC's HHA process, in order to determine whether the process as implemented provides the Navy with the best, comprehensive, and defensible evaluations of health hazards and to identify any elements that might require improvement. The task was assigned to the
