It is not caused by bacteria, viruses or parasites. In fact, mad cow disease is instead caused by infectious molecules called prions, which are not even technically alive and don ' t have DNA or RNA. Prions are a type of protein. You can think of a protein as a chain of little molecules called amino acids. This chain will fold up into a specific shape that is essential for the protein ' s job in the cell.

What are prions, and how do they cause mad cow disease ...

For reasons that are not yet understood, the normal prion protein changes into a pathogenic (harmful) form that then damages the central nervous system of cattle. Mad Cow Disease is a neurological disorder of cattle.
