In this sample, a WSDL contract with a WS-Security policy for a JAX-WS web service provider application is created. The WS-Security policy template called UsernameToken with X509Token asymmetric message protection (mutual authentication) is used. The client signs and encrypts the SOAP body and signs and encrypts the UsernameToken in the request message.

## **Securing a web service by using a WS-Security policy**

The XwsSecurityInterceptor is an EndpointInterceptor (see Section 5.4.4, "Intercepting requests - the EndpointInterceptor interface") that is based on SUN's XML and Web Services Security package (XWSS). This WS-Security implementation is part of the Java Web Services Developer Pack . Like any other endpoint interceptor, it is defined in the endpoint mapping (see Section 5.4, "Endpoint mappings"). This means that you can be selective about adding WS-Security support: some endpoint ...

## **Chapter 7. Securing your Web services with Spring-WS**

Web Services Security (WS Security) is a specification that defines how security measures are implemented in web services to protect them from external attacks. It is a set of protocols that ensure security for SOAP-based messages by implementing the principles of confidentiality, integrity and authentication.

## **Web Services Security (WS Security) - Definition from ...**

The configuration in general aims to achieve the following four main goals: Integrity and Authenticity: The "WS-Security" standard allows to use signatures as defined in the XML Signature standard... Confidentiality: In addition to signatures the "WS-Security"

A single web service may consist of a chain of applications. For example, one large service might tie together the services of three other applications. In this case, SSL is not adequate; the messages need to be encrypted at each node along the service path, and each node represents a potential weak link in the chain.

## **Web Services - Security - Tutorialspoint**

Securing SOAP-Based Web Services with WS-Security SOAP-based security provides end-to-end message-level security for Web services through an implementation of the WS-Security standard. WS-Security defines a mechanism that offers three levels of security to SOAP messages: Authentication tokens (username token).

## **1. Basic Concepts of Web Services Security - Securing Web ...**

This book is a good introduction to the application of security to Web Services and SOA. The authors focus on "message level" security versus "transport level" security, and its application to Web Services. The book explains standards: WS-Security, WS-Policy, WS-SecurePolicy and other current standards at the time of publishing (2004).
