Pawlick's "The End of Food" reads more like an opinionated blog than a book. In fact, most of the research for content seems to have been done on the internet. If you already know the subject, it's just so-so for new information. But there are countless passages where the writing is just plain awful.

At the heart of The End of Food is a grim paradox: the rise of large-scale food production, though it generates more food more cheaply than at any time in history, has reached a point of dangerously diminishing returns. Our high-volume factory systems are creating new risks for food-borne illness, from E. coli to avian flu.

A life-changing, research-based program that will end food allergies in children and adults forever. The problem of food allergy is exploding around us. But this book offers the first glimpse of hope with a powerful message: You can work with your family and your doctor to eliminate your food allergy forever. The trailblazing research of Dr. Kari Nadeau at Stanford University reveals that food allergy is not a life sentence, because the immune system can be retrained. Food allergies--from mild hives to life-threatening airway constriction--can be disrupted, slowed, and stopped. The key is a strategy called immunotherapy (IT)--the controlled, gradual reintroduction of an allergen into the body. With innovations that include

state-of-the-art therapies targeting specific components of the immune system, Dr. Nadeau and her team have increased the speed and effectiveness of this treatment to a matter of months. New York Times bestselling author Sloan Barnett, the mother of two children with food allergies, provides a lay perspective that helps make Dr. Nadeau's research accessible for everyone. Together, they walk readers through every aspect of food allergy, including how to find the right treatment and how to manage the ongoing fear of allergens that haunts so many sufferers, to give us a clear, supportive plan to combat a major national and global health issue.

Why do we overeat time and time again? Why do we make poor diet choices while we want to be healthy? What makes losing weight so difficult? These and many other vital questions are addressed in *12 Steps to Raw Foods* in an open and sincere dialogue. Based on the latest scientific research, Victoria Boutenko explains the numerous benefits of choosing a diet of fresh rather than cooked foods. This book contains self-tests and questionnaires that help the reader to determine if they have hidden eating patterns that undermine their health. Using examples from life, the author explores the most common reasons for people to make unhealthy eating choices. Rather than simply praising the benefits of raw foods, this book offers helpful tips and coping techniques to form and maintain new, healthy patterns. Learn how to make a raw food restaurant card that makes dining with co-workers easy and enjoyable. Discover three magic sentences that enable you to refuse your mother-in-law's apple pie without offending her. Find out how to sustain your chosen diet while traveling. These are only a few of the many scenarios that Boutenko outlines. Written in a convenient 12-step

format, this book guides the reader through the most significant physical, psychological, and spiritual phases of the transition from cooked to raw foods. Embracing the raw food lifestyle is more than simply turning off the stove. Such a radical change in the way we eat affects all aspects of life. Boutenko touches on the human relationship with nature, the value of supporting others, and the importance of living in harmony with people who don't share the same point of view on eating. Already a classic, this enhanced second edition is aimed at anyone interested in improving their health through diet.

Examines the physical, emotional, and spiritual problems behind eating disorders

Beginning to End Hunger presents the story of Belo Horizonte, home to 2.5 million people and the site of one of the world's most successful city-run food security programs. Since its Municipal Secretariat of Food and Nutritional Security was founded in 1993, Belo Horizonte has sharply reduced malnutrition, leading it to serve as an inspiration for Brazil's renowned Zero Hunger programs. The secretariat's work with local family farmers shows how food security, rural livelihoods, and healthy ecosystems can be supported together. While inevitably imperfect, Belo Horizonte offers a vision of a path away from food system dysfunction, unsustainability, and hunger. In this convincing case study, M. Jahi Chappell establishes the importance of holistic approaches to food security, suggests how to design successful policies to end hunger, and lays out strategies for enacting policy change. With these tools, we can take the next steps toward achieving similar reductions in hunger and food insecurity elsewhere in the developed and developing worlds.

In the US, food banks and pantries provide billions of meals a year to people in need. And yet hunger still affects one in nine Americans. What are we doing wrong? In *Reinventing Food Banks and Pantries*, Katie Martin presents a new model for charitable food, one where success is measured not by pounds of food distributed but by lives changed. The key is shifting our focus from a lack of food to strategies that build empathy, equity, and political will. Martin shares solutions in a warm, engaging style, with simple steps that anyone working or volunteering at a food bank or pantry can take today. Solutions range from providing client choice, where individuals select their own food with dignity, to offering job training programs and joining the fight for a living wage. As Martin writes, it takes more than food to end hunger. Picking up this insightful, lively book is a great first step.

In this era of eroding commitment to government sponsored welfare programs, voluntarism and private charity have become the popular, optimistic solutions to poverty and hunger. The resurgence of charity has to be a good thing, doesn't it? No, says sociologist Janet Poppendieck, not when stopgap charitable efforts replace consistent public policy, and poverty continues to grow. In *Sweet Charity?*, Poppendieck travels the country to work in soup kitchens and "gleaning" centers, reporting from the frontlines of America's hunger relief programs to assess the effectiveness of these homegrown efforts. We hear from the "clients" who receive meals too small to feed their families; from the enthusiastic volunteers; and from the directors, who wonder if their "successful" programs are in some way perpetuating the problem they are struggling to solve. Hailed as the most significant book on hunger to appear in decades, *Sweet*

An in-depth exposé of how the modern food system is putting our food supply in serious danger—with startling new evidence and guidance on what we can do to reclaim control of what we eat.

Learn Inner Nurturing and End Emotional Eating If you regularly eat when you're not truly hungry, choose unhealthy comfort foods, or eat beyond fullness, something is out of balance. Recent advances in brain science have uncovered the crucial role that our early social and emotional environment plays in the development of imbalanced eating patterns. When we do not receive consistent and sufficient emotional nurturance during our early years, we are at greater risk of seeking it from external sources, such as food. Despite logical arguments, we have difficulty modifying our behavior because we are under the influence of an emotionally dominant part of the brain. The good news is that the brain can be rewired for optimal emotional health. When Food Is Comfort presents a breakthrough mindfulness practice called Inner Nurturing, a comprehensive, step-by-step program developed by an author who was herself an emotional eater. You'll learn how to nurture yourself with the loving-kindness you crave and handle stressors more easily so that you can stop turning to food for comfort. Improved health and self-esteem, more energy, and weight loss will naturally follow.

France is in a rut, and so is French cuisine. Twenty-five years ago it was hard to have a bad

meal in France; now, in some cities and towns, it is a challenge to find a good one. For the first time in the annals of modern cuisine, the most influential chefs and the most talked-about restaurants in the world are not French. Within France, large segments of the wine industry are in crisis, cherished artisanal cheeses are threatened with extinction, and bistros and brasseries are disappearing at an alarming rate. But business is brisk at some establishments: Astonishingly, France has become the second most-profitable market in the world for McDonald's. In an enviable trip through the traditional pleasures of France, Steinberger talks to top chefs-Ducasse, Gagnaire, Bocuse-winemakers, farmers, bakers, and other artisans. He visits the Elysée Palace, interviews the head of McDonald's Europe, marches down a Paris boulevard with Jose Bove, and breaks bread with the editorial director of the powerful and secretive Michelin Guide. He spends hours with some of France's brightest young chefs and winemakers, who are battling to reinvigorate the country's rich culinary heritage. Throughout, Steinberger remains an unabashed and steadfast Francophile, and his own sharp and funny reflections bring empathy to this striking portrait of a cuisine and a country in transition.
