The resilience dividend not only enables people and communities to rebound faster from disasters or deal with stresses; it spurs economic development, job creation, environmental sustainability, and social cohesion. It brings benefit to people, organizations, and communities when things are going right as well as when they go wrong.

The Resilience Dividend: Being Strong in a World Where...

In this book, Judith Rodin shows how people, organizations, businesses, communities, and cities have developed resilience in the face of otherwise catastrophic challenges. Debika Ray thinks, if taken as an inspirational manual for policy makers, it is a readable and timely book. The Resilience Dividend: Being Strong in a World Where Things Go Wrong.

The Resilience Dividend: Being Strong in a World Where...

Building resilience—the ability to bounce back more quickly and effectively—is an urgent social and economic issue. Our interconnected world is susceptible to sudden and dramatic shocks and stresses: a cyber-attack, a new strain of virus, a structural failure, a violent storm, a civil disturbance, an economic blow. Through an astonishing range of stories, Judith Rodin shows how people, organizations, businesses, communities, and cities have developed resilience in the face of otherwise catastrophic challenges: • Medellín, Colombia, was once the drug and murder capital of South America. Now it 's host to international conferences and an emerging vacation destination. • Tulsa, Oklahoma, cracked the code of rapid urban development in a floodplain. • Airbnb, Toyota, Ikea, Coca-Cola, and other companies have realized the value of reducing vulnerabilities and potential threats to customers, employees, and their bottom line. • In the Mau Forest of Kenya, bottom-up solutions are critical for dealing with climate change, environmental degradation, and displacement of locals. • Following Superstorm Sandy, the Rockaway Surf Club in New York played a vital role in distributing emergency supplies. As we grow more adept at managing disruption and more skilled at resilience-building, Rodin reveals how we are able to create and take advantage of new economic and social opportunities that offer us the capacity to recover after catastrophes and grow strong in times of relative calm.

Building resilience—the ability to bounce back more quickly and effectively—is an urgent social and economic issue. Our interconnected world is susceptible to sudden and dramatic shocks and stresses: a cyber-attack, a new strain of virus, a structural failure, a violent storm, a civil disturbance, an economic blow. Through an astonishing range of stories, Judith Rodin shows how people, organizations, businesses, communities, and cities have developed resilience in the face of otherwise catastrophic challenges: • Medellín, Colombia, was once the drug and murder capital of South America. As we grow more adept at managing disruption and more skilled at resilience-building, Rodin reveals how we are able to create and take advantage of new economic and social opportunities that offer us the capacity to recover after catastrophes and grow strong in times of relative calm.

New York, Athens, Wenzhou, Boston, Oslo, Dhaka, New Orleans, Nairobi. In recent years, dozens of cities across the globe have been hit by large-scale catastrophes of every kind: natural disaster, geopolitical conflict, food shortages, disease and contagion, terrorist attacks. If you haven't been directly touched by one of these cataclysms yourself, in our interconnected world you are sure to have been affected in some way. They harm vulnerable individuals, destabilise communities and threaten organisations and even whole societies. We are at greater risk than ever from city-wide catastrophe, and as the severity and frequency of these disasters increase, we must become better at preparing for, responding to and recovering from them. Be it Haiti's dependence on humanitarian aid, the rebuilding effort after the Great Fire of Manhattan or the reason why more girls than boys drowned in Japan's 2011 tsunami, The Resilience Dividend combines vivid stories with practical insights (such as how to disaster-proof a building) and ground-breaking research to help build a radical future in which individuals, companies and entire societies face disaster by creating more dynamic, more resilient cities.

This book discusses the resilience of communities in both developed and developing world contexts. It investigates the notion of 'resilience' and the challenges faced by local communities around the world to deal with disturbances (natural hazards or human-made) that may threaten their long-term survival. Using global examples, specific emphasis is placed on how learning processes, traditions, policies and politics affect the resilience of communities and what constraints and opportunities exist for communities to raise resilience levels.

The frequency and severity of disasters over the last few decades have presented unprecedented challenges for communities across the United States. In 2005, Hurricane Katrina exposed the complexity and breadth of a deadly combination of existing community stressors, aging infrastructure, and a powerful natural hazard. In many ways, the devastation of Hurricane Katrina was a turning point for understanding and managing disasters, as well as related plan making and policy formulation. It brought the phrase "community resilience" into the lexicon of disaster management. Building and Measuring Community Resilience: Actions for Communities and the Gulf Research Program summarizes the existing portfolio of relevant or related resilience measurement efforts and notes gaps and challenges associated with them. It describes how some communities build and measure resilience and offers four key actions that communities could take to build and measure their resilience in order to address gaps identified in current community resilience measurement efforts. This report also provides recommendations to the Gulf Research Program to build and measure resilience in the Gulf of Mexico region.

This book unpicks the complex, dynamic blend of individuals' psychological and professional assets, workplace conditions and leadership support which enable teachers who stay in teaching to continue to make a difference in their careers, regardless of shifts in policy, workplace, professional and personal circumstances. Whilst much has been written over the years about teacher stress and burnout, there is very little research which reports on the conditions which are essential for teachers to sustain their commitment and effectiveness over their professional lives, in contexts of challenge and change. Drawing upon a range of educational, psychological, socio-cultural and neuro-scientific research, together with vivid accounts from teachers in a variety of primary and secondary schools internationally, and from their own research on teachers' work and identities, the authors discuss the dynamic nature, forms and practices of teacher resilience. They argue that resilience in teachers is not only their ability to bounce back in extremely adverse circumstances but that it is the capacity of teachers for everyday resilience which enables them to sustain their commitment and effectiveness in responding positively to the unavoidable uncertainties inherent of their professional lives. The authors conclude that resilience in teachers can be nurtured by the intellectual, social and organisational environments in which teachers work and live, rather than being simply a personal attribute or trait, determined by nature. Resilient Teachers, Resilient Schools will be of key interest to policy makers, head teachers, teachers and training and development organisations who wish to improve quality and standards in schools.

"As we look ahead to the recovery from the COVID-19 crisis, Making Money Moral could not come at a better time." —Jamie Dimon, Chairman and Chief Executive Officer, JPMorgan ChaseThe math doesn't add up: Global financial markets can no longer ignore the world's most critical problems. The risks are too high and the costs too great.In Making Money Moral: How a New Wave of Visionaries Is Linking Purpose and Profit, authors Judith Rodin and Saadia Madsbjerg explore a burgeoning movement of bold and ambitious innovators. These trailblazers are unlocking private-sector investments in new ways to solve global problems, from environmental challenges to social issues such as poverty and inequality. They are earning great returns and reimagining capitalism in the process. Pioneers in the field of sustainable and impact investing, Rodin and Madsbjerg offer first-hand stories of how investors of every type and in every asset class are investing in world-changing solutions—with great success. Meet the visionaries who are leading this movement: The investment managers putting trillions of dollars to work, like TPG, Wellington Management, State Street Global Advisors, Nuveen, Armutung APS and Natixis; The asset owners driving the transition, like GPIF and PensionDanmark; A new generation of entrepreneurs benefiting from the investments, like DreamBox Learning, an innovative educational technology platform, and GoodLife Pharmacies, which is disrupting the traditional notion of a pharmacy; The corporations that are repurposing their business models to meet demand for sustainable products and services, like Ørsted; and The nonprofits that are reimagining how to raise money for their work while creating significant value for investors, like The Nature Conservancy. In their book, Rodin and Madsbjerg offer a deep look at the most powerful tools available today—and how they can be unlocked. They reveal: Who the investors are and what they want; How innovative products and investment strategies can deliver long-term value for investors while improving lives and protecting ecosystems; How leaders can build strategies and prepare their organizations to enter and expand this dynamic market; and How to measure impact, understand critical regulations, and avoid potential pitfalls. A roadmap to making the financial market a force for good, Making Money Moral is a must-read for those seeking private-sector capital to address a big problem, as well as those seeking both to mitigate risk and to invest in big solutions."Judith Rodin and Saadia Madsbjerg identify an important new way of looking at money: from the root of all evil to the fount of all solutions. Their timely, important book on impact investing is full of powerful insights and compelling examples they've seen firsthand. Their work will be sure to accelerate momentum toward a more sustainable world." —Rosabeth Moss Kanter, Harvard Business School Professor and Author of Think Outside the Building: How Advanced Leaders Can Change the World One Smart Innovation at a Time

How can we plan and design stronger communities? From New Orleans to Galveston to the Jersey Shore, communities struck by natural disasters struggle to recover long after the first responders have left. Globally, the average annual number of natural disasters has more than doubled since 1980. These catastrophes are increasing in number as well as in magnitude, causing greater damage as we experience rising sea levels and other effects of climate change. Communities can reduce their vulnerability to disaster by becoming more resilient—to not only bounce back more readily from disasters but to grow stronger, more socially cohesive, and more environmentally responsible. To be truly resilient, disaster preparation and response must consider all populations in the community. By bringing together natural hazards planning and community planning to consider vulnerabilities, more resilient and equitable communities are achievable. In Planning for Community Resilience the authors describe an inclusive process for creating disaster-resilient communities. Based on their recovery work after Hurricane Ike in Galveston, Texas, they developed a process that relies on the Disaster Impacts Model. This handbook guides any community through the process of determining their level of hazard exposure, physical vulnerability, and social vulnerability with the goal of determining the best planning strategy. Planning for Community Resilience will be invaluable to professionals working to protect their community from disturbance, including city planners, elected officials, floodplain managers, natural hazard managers, planning commissioners, local business leaders, and citizen organizers.

This long-awaited new textbook will be of enormous value to students and teachers in cross-cultural and social psychology. The key strength of Understanding Social Psychology Across Cultures: Living and Working in a Changing World is how it illustrates the ways in which culture shapes psychological process across a wide range of social contexts. It also effectively examines the strengths and limitations of the key theories, methods and instruments used in cross-cultural research.

'Economic losses from natural disasters totaled \$92 billion in 2015.' Such statements, all too commonplace, assess the severity of disasters by no other measure than the damage inflicted on buildings, infrastructure, and agricultural production. But \$1 in losses does not mean the same thing to a rich person that it does to a poor person; the gravity of a \$92 billion loss depends on who experiences it. By focusing on aggregate losses—the traditional approach to disaster risk—we restrict our consideration to how disasters affect those wealthy enough to have assets to lose in the first place, and largely ignore the plight of poor people. This report moves beyond asset and production losses and shifts its attention to how natural disasters affect people 's well-being. Disasters are far greater threats to well-being than traditional estimates suggest. This approach provides a more nuanced view of natural disasters than usual reporting, and a perspective that takes fuller account of poor people 's vulnerabilities. Poor people suffer only a fraction of economic losses caused by disasters, but they bear the brunt of their consequences. Understanding the disproportionate vulnerability of poor people also makes the case for setting new intervention priorities to lessen the impact of natural disasters on the world 's poor, such as expanding financial inclusion, disaster risk and health insurance, social protection and adaptive safety nets, contingent finance and reserve funds, and universal access to early warning systems. Efforts to reduce disaster risk and poverty go hand in hand. Because disasters impoverish so many, disaster risk management is inseparable from poverty reduction policy, and vice versa. As climate change magnifies natural hazards, and because protection infrastructure alone cannot eliminate risk, a more resilient population has never been more critical to breaking the cycle of disaster-induced poverty.
